ARTIST

Radiohead

Oxford, England

Restless, inventive, and deeply influential, Radiohead have redefined what modern music can be. From otherworldly electronica to intimate lyricism, their work continues to challenge and inspire.

The story

From Oxfordshire to a sound that redefined a generation.

Radiohead formed in 1985 in Abingdon, Oxfordshire, bringing together Thom Yorke, Jonny Greenwood, Colin Greenwood, Ed O'Brien and Phil Selway. They built a devoted following in the UK through their early releases and relentless touring.

Across the 1990s and 2000s, Radiohead evolved from alternative rock to a bolder, more experimental sound, blending electronic textures, unconventional song structures and a distinctive visual world.

Implementation instructions

The seven updated mockups are embedded on the preceding pages. This section contains the full consolidated handoff.

Ear Clef - consolidated UI implementation handoff

Prepared for Stefano Kajatt · 12 October 2026

Instructions to Claude

Please implement the following UI upgrade in my existing earclef.com project. Inspect the current code, routes, data sources and components first. Reuse working functionality and real data. Treat this document as the source of truth, with the attached mockups as visual references. Build a reviewable preview and explain any genuine access/data limitations. Do not replace the existing project with a disconnected demo or publish a production release without my request.

These notes combine my feedback across the design conversation. Later, explicit decisions below supersede earlier mockups. Generated photos, products, news, dates, source names and track selections are illustrative, not production content. Never copy their factual details without verifying them. Preserve my real Ear Clef logo from the project: the black-and-white ear/treble-clef yin-yang mark. Never substitute the gold vinyl-record logo shown in older mockups.

1. Product direction and visual rules

Ear Clef is currently a music-discovery and artist-information hub. Artist memberships, payments, uploaded catalogs and deeper artist-fan features are future work. Keep the current upgrade focused on discovery, following, saving, artist information and YouTube listening.

- Use the first Explore design, supplied as “Screenshot 2026-10-12 at 6.32.48 PM.png”, as the visual anchor. Preserve its layout, subdued globe, typography, spacing, thin year slider, and Globe/Map/List control.

- Warm near-black background, ivory text, restrained gold actions and muted sage accents. Serif headings, readable sans-serif body text; avoid excessive italics, glow, saturated globe textures, decorative chips and card clutter.

- Preserve the existing original Ear Clef logo using the actual image asset, not a generated approximation. Existing public asset observed at https://earclef.com/images/earclef-mark.png; prefer the canonical project asset.

- Keep consistent navigation and provide a clearly labeled route to My Taste Map. A visual avatar alone must have an accessible label.

- Remove the persistent bottom music player from all pages, including the otherwise approved My Taste Map.

- Prefer progressive disclosure: dropdown filters closed by default, official links collapsed, long content opened on demand.

- Preserve existing accounts, saved data, follow relationships and working features. Migrate existing follow tiers carefully rather than resetting them.

2. Listening model

YouTube is the default in-site playback provider. Ear Clef does not host this catalog. Use legitimate visible YouTube embeds where available; otherwise provide a clearly labeled external link. Prefer official artist/label videos when matching a song.

The Explore page already contains its video player within the selected country/era panel. Add a clearly labeled “Pop out player” action beside the embed, outside the provider's controls. It should let the user continue listening while navigating the globe or other Ear Clef pages. This is a detachable player, not exporting or downloading music.

Implementation requirements:

- Keep a single active playback owner and queue; avoid two players sounding simultaneously.

- Preserve playback across internal route changes. Keep the playback host outside route components where the existing architecture allows.

- Investigate a user-opened dedicated player window and supported picture-in-picture options. Document what the target browsers support; do not promise a seamless transfer if the browser/YouTube API requires a brief restart. Retain track, queue and position where supported.

- Provide return/dock and close actions. If a popup is blocked, explain it and retain the in-page player. Do not silently lose the listening session.

- Keep YouTube's video visible and provider controls/branding intact. Check current provider requirements before implementing collapsed/background behavior; pause rather than hiding a video in a prohibited audio-only state.

- On mobile use a practical visible-player layout; explain any limits on a separate window or playback across pages.

- Browsing to a new country/year does not replace the currently playing queue until the user explicitly chooses to play it. Show which selection is browsing and which is playing.

Near the artist music section add “Open music in: YouTube ▾”. This picker changes outbound music links, not subscription authentication or in-site subscription playback. Proposed choices: YouTube (default), Spotify, Apple Music, Amazon Music, Bandcamp, TIDAL. Show providers only when appropriate links are available. Prefer an exact track/album URL; label fallback searches “Search on [service]”. Remember preference using existing user settings or local storage for guests. Picking Spotify must not be labeled “Connected” or imply Premium playback inside Ear Clef.

3. Explore

Preserve the first uploaded Explore screenshot as closely as possible, with only these intended changes:

1. Original Ear Clef logo; no bottom audio bar.

2. The “Curated journey” label uses one consistent text color.

3. The Brazil/era panel contains the YouTube player and detachable-player action. Keep the same card footprint and hierarchy; a thumbnail can occupy the original cover-art area until playback starts.

4. Label the bottom recommendation carousel “Music cultures”. Place a small “See all” above the LEFT side of the cards. Place a right arrow at the RIGHT edge to make horizontal browsing clear; support touch, keyboard and a previous arrow after advancing. “See all” opens the full culture collection.

Keep the thin circular-handle year slider. Retain existing historical coverage (currently 1900-present); the mockup's decade ticks are visual references, not permission to truncate the range. Allow precise year selection with an accessible input while keeping the design simple. Preserve the 3D Globe / Map / List selector; all three views share selected place/year/filter state. Map and List are usable alternatives when 3D is unavailable.

Culture cards must lead to meaningful collections anchored in place/scene, era and sound. Clearly identify editorial journeys rather than presenting arbitrary global recommendations as a cohesive culture. Preserve preferred card layout while using verified content.

4. Artists directory and follow tiers

Keep the artist search bar, followed by closed Genre, Place and Era dropdowns.

FIRST ROW: “Discover new artists”. Recommendations come from artists the listener follows. Each recommendation has a short bio, image/video thumbnail, follow action and, where supported, a brief explanation such as “Because you follow Tinariwen”. Clicking play should open an official music video when available, otherwise a verified song on YouTube. Do not recommend already-followed artists as new. For a new visitor, use an honestly labeled curated starter selection instead of pretending personalization exists.

SECOND ROW: “Heavy rotation” by default, with a dropdown to switch the followed collection. These are personal relationship tiers, not inferred listening-frequency statistics:

Tier	Meaning
Heavy rotation	All-time favorites
In the mix	Artists I like and listen to occasionally
On the radar	Artists I may know from only one or two songs

An artist belongs to one tier at a time. “Follow” opens a tier choice; followed cards display their current tier and allow changing it or unfollowing. Preserve existing tier meanings and preferences. The three tiers drive directory views, feed filters and recommendation signals. All tiers contribute; give favorites more weight without excluding exploration.

5. My Taste Map

Keep the approved arrangement: saved songs on the left, world discovery map at upper right, resume-journey card beneath it, collections below the song list, and Saved songs / Following / Journeys tabs.

- Saved songs: play via YouTube, save/unsave, add/remove from a collection.

- Following: artists and their assigned tiers.

- Journeys: saved culture routes/selections and a way to resume them.

- Collections: named user-curated groups of songs; create, rename and manage with existing persistence patterns.

- Map shows music origins explored, not the listener's physical location. Explain its basis; never infer residence or use geolocation for this.

- Recording listening history is a new data behavior if the current site does not do it. Use a transparent local-first/opt-in approach appropriate to the existing privacy model. Update the privacy text for actual implemented storage and provide clearing controls. Never fabricate map activity or counts for real users.

- Replace the old generated logo and remove the bottom player. Use the shared YouTube playback workflow.

6. On This Day

Keep it quiet: date chooser, a readable release list and selected-track context. No “Take a detour” section, decorative hero collage or oversized recommendation cards.

When a song plays, show its verified year, country/area and genre. Each is independently clickable to explore that dimension. “More from this music culture” combines the era, general location and genre. Explain nearby matches and data gaps; do not claim exact matches when expanding the search.

The selected day is month/day for historical release discovery. Individual year/era filtering is a separate concept. Regional release dates, first release, recording date and reissue dates must not silently be treated as interchangeable. Keep source details accessible. Do not invent historical facts or populate an era with unrelated modern recordings without explicit labels.

7. Feed

One vertical Instagram-like feed. Only these top-level filters, exactly: All, Heavy rotation, In the mix, On the radar. “All” means all artists the user follows, not the entire site roster. Support an artist-specific feed using the same component/data model.

Sources can be anywhere appropriate, not just YouTube: official artist websites, publishers, news outlets, interviews, tour pages, video platforms, books, films and other credible sources. Content can include new music, live performances, interviews, tour announcements, creative projects, published books, film/TV roles and cameos, collaborations, artist announcements and relevant respectful news such as an artist's death. Exclude rumors, invasive gossip and engagement bait. Multi-artist features appear once and can be associated with multiple followed artists.

Every entry uses the SAME template and general size:

1. Artist avatar/name, content type, date, overflow.

2. Consistent 16:9 preview area: video still, article image, book cover or announcement artwork. Letterbox/crop thoughtfully; text-only sources get a restrained graphic fallback.

3. Fixed title/caption slots with sensible line limits; “Read more” expands details.

4. Source/publisher attribution, save action and appropriate primary action: Watch, Read at source, View tour, Explore book, etc.

Normalize previews rather than embedding arbitrary third-party widgets that destroy the card sizing. Play inside a controlled expansion or shared video surface. Preserve scrolling position. Use deduplication and reliable event/publish dates. Default to newest first; do not label a reordered editorial feed chronological. Provide a finite batch/load-more and a clear caught-up state; no manipulative infinite engagement loop.

8. Individual artist page - one-stop hub

Keep the liked hero and overall character, but make it less cluttered. Preserve clear anchors: Overview, Music, Videos, Live, Story, Merch. Add useful context, follow-tier selector and share action. Clearly distinguish an Ear Clef editorial page from one actually managed by an artist; do not imply endorsement.

Music and links

- Start-here listening introduction and discography.

- Streaming-service link picker close to Music.

- “Official links” is a CLOSED accordion by default. Inside: verified site, social profiles and relevant services. No large always-visible link sidebar.

- Discography filters and sorting are specified below. Show source-correct artwork, release types and dates.

Video explorer

Provide distinct “From the artist” and “About the artist” views, searchable and filterable.

From the artist: official music videos, live performances, official interviews, behind-the-scenes, visualizers/lyric videos and studio sessions.

About the artist: documentaries, artist-history/iceberg videos, music-video meaning breakdowns, song/album analysis, music theory and production breakdowns, essays, covers/remixes where relevant, and reactions. Reactions are the LOWEST recommendation priority and appear last in default relevance; users can explicitly filter for them.

Independent creator content must be attributed to its creator/source and labeled distinct from official material. An interview may be published by an independent outlet; classification must not falsely call it artist-owned. Prioritize relevant substantive content and credible sources, not merely views. No fabricated official badge. Use YouTube playback where appropriate and source links for other providers.

Live & setlists

ONE shared content panel with Upcoming / Past shows tabs. Remove the separate right-hand “Explore past shows” panel and duplicate stage-photo block from the previous image. Switching tabs replaces the same content area.

Upcoming: verified announced dates, venue, location, official ticket/tour links; honest empty state when unknown. Past shows: year and location filters, dates, venues, setlist links and verified performance links where available. Do not use “no shows” if the actual condition is “not loaded” or “no source connected”.

Story, key moments and artist feed

Short story with Read full story. Keep the key-moments timeline, with a visible, keyboard-accessible internal scroll area to reach the latest verified events. Add year navigation if helpful. On narrow screens a normal expandable chronological list is preferable to a tiny nested scrolling box.

Rename the adjacent “Editorial & interviews” area to “Feed”. It previews only this artist's mixed-source feed and links to the full artist-filtered feed. Same card conventions as the main feed. A release, book, interview or collaboration can link from a timeline milestone to supporting content; distinguish dates accurately. Avoid invented “last checked” values.

Merch and connections

Keep Records, Clothing and Art & editions with verified imagery/links to the artist's official store. No invented stock, prices or checkout promises. Purchases happen at the destination store.

Keep “Explore the connections”: related bands, solo projects, members, collaborators and other meaningful relationships, labeled with the actual connection. Use verified relationships and useful destination pages.

9. Dropdown definitions

These are recommended implementation defaults where my notes did not specify exact choices. Use actual catalog values and hide unsupported filters instead of fabricating functionality.

Control	Options and behavior
Follow tier	Heavy rotation; In the mix; On the radar. Existing follows also offer Unfollow.
Directory Genre	All genres; searchable genres actually present; allow multiple selections.
Directory Place	Anywhere; country → region/state → city where supported. Label artist origin/association clearly.
Directory Era	All eras; decade selections; optional custom year range. Use documented active/release years, not a solo artist's birth year as their career start.
Music service	YouTube default; Spotify; Apple Music; Amazon Music; Bandcamp; TIDAL, when useful links exist. These are outbound links.
Discography type	All releases; Albums; EPs; Singles; Live releases; Compilations; Soundtracks; Reissues/expanded editions where metadata supports them. Default Albums.
Discography sort	Oldest first (chronological); Newest first (reverse chronological); Title A-Z. Add popularity only if a credible metric is available and explained.
Video ownership/view	From the artist; About the artist. Interviews retain accurate publisher attribution.
Video Type: From artist	All; Music videos; Live performances; Interviews; Behind the scenes; Lyric videos/visualizers; Studio sessions.
Video Type: About artist	All; Documentaries/history; Icebergs/deep dives; Music-video meanings; Song/album analysis; Theory/production; Covers/remixes; Reactions.
Video Era	All years; decades; custom range if supported. Label whether this filters upload date or performance/content era; use upload date unless reliable event metadata exists.
Video Sort	Recommended default; Newest published; Oldest published. In Recommended, reactions rank last; explicit reaction filter overrides that.
Past shows Year	All years; years with available events.
Past shows Location	Anywhere; supported country/region/city values from actual events.
Timeline jump	Beginning; available years/decades; Latest verified.
Feed filters	All; Heavy rotation; In the mix; On the radar. No extra top-level filters.

10. Data and behavior fixes carried forward

- Search own curated roster first. A search for Trust in the Sun must not silently open Suntrust. Show disambiguation for ambiguous matches and do not let an unrelated selected historical year hide an exact artist match.

- Preserve selected place/era across views and useful share URLs. Allow a clearly labeled All years mode or nearby-era fallback; never silently broaden.

- Country/era queue labels must match the actual selected recordings. Do not use birth dates, upload dates or reissues as false evidence of recording era.

- Remove public EDIT-ME text, test tones and unfinished placeholders. A simple truthful Trust in the Sun page with real links is sufficient for now.

- Album and track links should lead to exact verified items when possible, with explicit search fallbacks.

- Feed must match its ordering labels and selected follow tiers.

11. Delivery plan and acceptance checks

Implement in manageable steps: shared theme/logo/navigation and follow-tier components; faithful Explore layout and playback lifecycle; directory/Taste Map/On This Day; feed normalization and expanded artist hub. Reuse current sources first. Document new data work separately; do not silently pretend that every requested recommendation or feed source already exists.

Acceptance checks:

- Preferred Explore composition, muted globe, slider and Globe/Map/List survive. See all is above the left of Music cultures; next arrow scrolls the row.

- Original Ear Clef logo appears consistently. No bottom audio player.

- YouTube player is visible; navigating, popping out, docking, popup blocking and closing have tested outcomes without duplicate audio. Report browser limits.

- Dropdowns actually work; changing follow tier updates directory/feed and persists safely.

- Directory recommendations precede the followed tier; established members retain existing follows.

- Taste Map retains the approved layout, accessible collection controls and honest history/map state.

- On This Day exposes independent year/place/genre links and a combined culture action.

- Main Feed has only the four requested filters and uniform previews from at least video, article and official-announcement source types. No fabricated posts in production.

- Artist links accordion starts closed; service picker changes link destinations; album type/sort work.

- Video explorer includes independent analysis and iceberg-style content with correct attribution; reactions are lowest priority.

- One Live & setlists area switches Upcoming/Past. Timeline reaches latest verified entries. Adjacent Feed filters to this artist. Merch and connections have real destinations.

- Check desktop/tablet/mobile, keyboard navigation, visible focus, readable contrast, screen-reader labels, touch targets and reduced motion. Avoid horizontal page overflow and inaccessible nested scroll traps.

- Check loading, empty, error, missing artwork, unavailable embed, missing source and unsigned-in states.

- Deliver a preview, concise change summary, meaningful validation results and any unresolved source/access limitations. Written requirements take precedence over stray generated-image artifacts.

Reference images to attach

Attach the updated Explore, Artists directory, My Taste Map, On This Day, Feed, artist music/videos, and artist live/story/merch views. Also attach the original preferred Explore screenshot as the fidelity reference. The second uploaded screenshot highlights the duplicate Live/Past-show arrangement to eliminate; do not rebuild that duplication.

Exact logo asset, factual data, functional requirements and dropdown behavior come from this handoff/project, not generated pixels. In particular, do not copy mismatched decade examples, fake publication names or invented source-check dates from any image.
